OfficeServ Digital Keyphones

OfficeServ Keyphones combine a smart ergonomic design with powerful functionality. With features including eight ring tones for easy identification, adjustable speaker, handset and ring volume.

Keyphones for All Requirements

The display phone features a two line scrollable LCD display, 7, 14 or 38 programmable keys, all with tri-coloured LED displays enabling the phone to be tailored to suit the user's requirements. If a display phone is not required Samsung offer the cost effective economic Keyphone. All OfficeServ Keyphones are compatible with a wide range of headsets for operator or call centre working.

Programmable Keys

Each of the programmable keys can be set to one of 74 different uses to provide a range of functions, including speed dial, direct trunk access and call pick-up.

On Hook Dialling

Users can initiate calls without lifting the handset by using the integral microphone or the handset when a call is answered. The Samsung range of Keyphones are full hands free phones.

Speed Dialling

The Samsung speed dialling facility is like having an integral telephone directory with the ability to store up to 500 names and numbers.

OfficeServ display Keyphones allow the user to view and select numbers for single key dialling. Frequently used numbers can also be programmed for single key dialling.

Context Sensitive Keys

The integral LCD display of OfficeServ Keyphones allows you to access the power of the system via three softkeys. The text on the screen shows exactly which functions are available depending on the status of the call you are currently handling. For example, if a call is on hold, or being transferred, the softkeys show the logical options available. When making a call the directory listing allows you to scroll to the required name, press a button and the number is dialled automatically.

Coloured Light Indication

The tri-coloured light on the OfficeServ Keyphones allow the user to track all calls. Green lights indicate the users calls. Red lights indicate other system calls. Amber lights show recalls.

Redialling

OfficeServ Key phones provide three types of redialling. Last Number Redial. Auto Retry (reserves an outside line automatically redialling for a pre-programmed number of times). Save Number (stores the number for redial after other calls have been made).

Samsung OfficeServ Digital Keyphones

Style and Intelligence on Your Desktop

Samsung Digital Communications Systems use the latest digital technology to provide your company maximum operating efficiency. The OfficeServ range of digital keyphones with their smart, ergonomic design and extensive use of menu driven prompts on the display models, allow easy access to the full functionality of the Samsung OfficeServ – for everyone in your company.
